Ian Crozier, MD, is a Vanderbilt University-trained infectious diseases specialist originally from Bulawayo, Zimbabwe. Over the past six years, primarily at the Infectious Diseases Institute in Kampala, Uganda, his work has focused on developing clinical reasoning skills in African clinicians providing complex HIV/AIDS care. In August 2014, he was deployed by the World Health Organization to the Ebola Treatment Unit in Kenema, Sierra Leone. After becoming infected with Ebola, he was evacuated to Emory University Hospital in Atlanta, becoming critically ill. He survived the infection and emerged after a six-week hospitalization. He has been called potentially the sickest Ebola survivor ever and provides a bilingual perspective as both an Ebola doctor and an Ebola survivor.

Dr. Crozier received his medical degree from Vanderbilt University School of Medicine, where he also completed a residency and chief residency in internal medicine and a research fellowship in the Division of Infectious Diseases.
