OBJECTIVES

- Improve outcome in CCHF patient.

METHODS

- Data analysis was performed by SPSS 16.0.
- Chi-square test was used to determine the efficacy of Ribavirin in CCHF cases.

RESULTS

- Ribavirin showed superiority compared to supportive therapy and those who only received supportive therapy.
- The time to discharge from the hospital was shorter in the Ribavirin group than in the supportive therapy group.

CONCLUSION

- Ribavirin was effective in improving the outcome of CCHF patients.
