Efficacy and Safety of Omadacycline in Patients With Acute Bacterial Skin and Skin Structure Infections (ABSSSI) and High Body Mass Index or Diabetes: A Subgroup Analysis From the OASIS Trial

Mark Wilcock, MD; Nancy Cure-Bolt, MD; Surya Chitra, PhD, MBA; Evan Tzanis, BA; Paul McGovern, MD

Leeds Teaching Hospitals, Leeds, UK; Paralex Pharmaceuticals, King of Prussia, PA, USA

**RESULTS**

- **Overall, patients with high BMI or diabetes did not exhibit differences in outcomes compared to patients with normal BMI or diabetes** (Figure 5).
- **Drug-related serious TEAEs were very rare and no drug-related serious TEAEs leading to death were observed** (Table 1).
- **OLTO was observed in 12.1% of patients receiving linezolid** (OMC: n = 214, LZD: n = 214).
- **Most common liver chemistry TEAEs associated with OMC were increased ALT and AST** (Table 1).
